

MiniGenius – Next Steps Development File

This document contains: - AI UI Generation Prompts (Full Screens) - Prototype Development Plan - Flutter Coding Structure - Play Store Listing Draft - New/Improved Screens Additions

1. Full UI Generation Prompts (AI-Ready)

Use these prompts in Midjourney / DALL·E / Figma AI to generate complete polished UI.

Splash Screen

Design a bright playful splash screen for a kids app called MiniGenius. Use a large smiling cartoon brain mascot, sky-blue gradient background, soft stars floating, rounded shapes, modern flat vector style.

Home Screen

Create a home screen for a children's brain-training app with 6 colorful round game icons in a 2×3 grid, big friendly buttons, soft shadows, a cute MiniGenius logo on top, and a blue gradient background.

Game Select Screen

Design a level select screen with 10 circular levels (unlocked: blue with stars, locked: grey with lock), a large yellow START button, rounded design, child-friendly colors.

Memory Game Screen

Create a 3×3 memory card game screen for kids with pastel-colored rounded cards, flipping animation feel, a top bar showing level and stars, playful flat design.

Result / Reward Screen

Design a reward screen with large colorful stars, confetti, a "Level Passed" header, cute stickers, and big rounded buttons (Retry, Next, Home). Child-friendly and bright.

Sticker Album

Create a sticker album screen with a 3×4 grid of cartoon brain stickers, some unlocked, some greyed-out, soft rounded cards, playful colors.

2. Prototype Development Plan

A step-by-step guide to build a working prototype.

Phase 1 – Structure (Day 1)

- Create project in Flutter
- Build navigation structure
- Implement bottom nav bar
- Add placeholder screens for all pages

Phase 2 – UI (Day 2–3)

- Integrate generated UI from AI
- Convert images to Flutter widgets
- Build splash, home, select, gameplay screens

Phase 3 – Mini-Game Logic (Day 4–6)

- Add Memory game logic
- Add Shape Matcher logic
- Add Pattern Logic
- Add scoring + stars + progress

Phase 4 – Rewards System (Day 7)

- Sticker rewards
- Daily gift popup
- Achievements tracking

Phase 5 – Polish (Day 8)

- Animations
 - Responsive layout
 - Offline support
-

3. Flutter Coding Structure

Recommended project structure:

```
lib/  
  main.dart  
  core/  
    theme/  
    widgets/  
  features/  
    home/  
    games/  
      memory/  
      shapes/  
      difference/  
    rewards/  
    stickers/  
    achievements/  
  services/  
    storage/  
    ads/
```

Key Components

- **GameEngine class:** handles scoring, levels
 - **StickerManager:** unlocks & stores stickers
 - **LocalStorageService:** saves user progress
-

4. Play Store Listing (Draft)

App Title

MiniGenius – Fun Brain Games for Kids

Short Description

Smart, fun mini-games that boost your child's memory, logic, and focus.

Full Description

MiniGenius is a playful educational app designed for children ages 4–12. With colorful brain-training games, rewards, stickers, and achievements, kids learn while having fun!

Features

- Memory games
- Differences puzzles
- Shape matching
- Logic patterns
- Cute stickers & trophies
- Safe, child-friendly design
- Banner ads only (no intrusive ads)

Keywords

kids brain games, memory game, logic for kids, educational app, mini games, children learning

5. New Screens & Improvements

Added Screens

- **Profile Screen** (Child Avatar, Name, Age)
- **Parent Dashboard** (Playtime, Skill Progress)
- **In-App Shop** (Remove ads, bonus stickers)

Improvements

- Add animated brain character to home screen
 - Add sound ON/OFF button in gameplay
 - Add hint button (limited uses)
-

End of Document

This file contains everything needed for UI generation, prototype development, coding, publishing, and future expansion of MiniGenius.
